

HEALTH POLL:

Vaccinations

May 2015

SURVEY OVERVIEW

Each month, the Truven Health Analytics™-NPR Health Poll surveys approximately 3,000 Americans to gauge attitudes and opinions on a wide range of healthcare issues. Poll results are reported by NPR on the health blog Shots (<http://www.npr.org/blogs/health/>) and on air.

The Truven Health Analytics-NPR Health Poll is powered by the Truven Health Analytics PULSE® Healthcare Survey, an independently funded multi-modal (land line, cell phone, internet) survey that collects information from more than 82,000 U.S. households annually.

The results depicted here represent responses from 3,004 survey participants interviewed from March 2-14, 2015. The margin of error is +/- 1.8 percent.

NPR's reports on the findings are archived here: <http://www.npr.org/templates/search/index.php?searchinput=truven+health&dateId=0&programId=0>

Executive Summary

The survey asked respondents' opinions on access to their healthcare data.

This survey asked adults of all ages, with and without children, about their concerns and beliefs around vaccinations for children. Among respondents with no children, 87 percent expressed no concerns regarding vaccinations. However, among those with children, only 72 percent reported no concern while 28 percent indicated they have concerns. The leading identified concerns were negative side effects and the possibility that vaccinations could cause illnesses or chronic conditions.

A large majority of respondents (91 percent) agree that all children attending public schools should be required to have vaccinations. But, when asked if all children should be vaccinated regardless of the type of school they attend, the agreement rate fell to 83 percent among respondents with children while 89 percent of respondents without children agreed that all should receive vaccinations. More than a third of adults with children support exemptions from vaccinations for personal or religious reasons, while just over a quarter of those without children support exemptions.

Additional results from the survey:

- 13 percent of all respondents with NO children indicated they had concerns regarding vaccinations, and among this group the top concerns were negative side effects (26 percent); fear that vaccines would cause illness (23 percent); and public health concerns (19 percent).
- 28 percent of all respondents WITH children indicated they had concerns regarding vaccinations, and among this group the top concerns were negative side effects (36 percent); fear that vaccines would cause illness (27 percent); and other (18 percent).
- 28 percent of respondents with NO children support exemptions from vaccinations for personal or religious reasons; 38 percent of respondents WITH children support exemptions from vaccinations for personal or religious reasons and is statistically different than respondents with NO children.
- 91 percent of respondents with NO children and also respondents WITH children indicated that all children attending public schools should be required to have recommended vaccinations; millennials WITH children are among the most likely (95 percent) to agree. Overall, this rate tends to increase with increasing level of education for respondents WITH children.
- 97 percent of respondents WITH children indicated that their children had received all of the recommended vaccinations, a rate that tends to increase with increasing age but decrease with increasing level of education.
- Among respondents WITH children who have not had all the recommended vaccinations, the top-cited reason was religious.
- 63 percent of respondents whose children have not had all the recommended vaccinations indicated they would get the recommended vaccinations, a rate that tends to increase with increasing level of education.

Survey Data

Note: Bolded figures are statistically significant within Children or No Children category.

Note: Purple bolded figures are statistically significant at Children/No Children category level only.

Note: Care should be taken with interpretations for questions 7, 8, and 13 due to small sample sizes.

Questions 1 and 12

Do you have any concerns regarding vaccinations for children?

	No Children		Children	
	Yes	No	Yes	No
Age				
<35	18.8%	81.2%	34.6%	65.4%
35 - 64	8.7%	91.3%	25.3%	74.7%
65+	14.3%	85.7%	6.7%	93.3%
Total	12.5%	87.5%	28.3%	71.7%
Education				
HS or Less	13.8%	86.2%	26.9%	73.1%
Some College/Assoc	13.9%	86.1%	23.7%	76.3%
College+	10.4%	89.6%	32.1%	67.9%
Total	12.5%	87.5%	28.3%	71.7%
Generation
